Art Unit: 2626

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Yasuda.

With respect to claim 1, Yasuda teaches a resource (20) held in computer memory (according to col. 5, lines 14-17), multiple parallel processors (referred to as other resource managers in figure 10, or elements 11-16 at fig. 3 and col. 3, lines 37-45) which require simultaneous access to the resource and a resource address generator (20a) to generated coordinates within the resource, where the resource is divided into different parts (other resource managers or 20b, 22 and 23) with each part being stored in different memory banks (22 or 23a), and the resource address generator generates coordinates which are used to select the parts of the resource that are used by each processor, the selection being arranged to ensure that each part is only used by one processor at a time (inherent based upon the selection of the mode of operation as designated by the evaluation circuit 21).

Art Unit: 2626

With respect to claim 2, Yasuda teaches processing in a manner as it appears to the resource. See col. 5, lines 1-5 and 34-40 and col. 6, line 63 to col. 7, line 4.

With respect to claim 7, Yasuda teaches a method of accessing resources held in computer memory (according to col. 5, lines 14-17) where multiple parallel processors (other resource managers @ figure 10 require simultaneous access to the resource and there is a resource address generator (20a) or elements 11-16 of figure 3 and col. 3, lines 37-45 to generate coordinates within the resource, the method comprising the steps of: dividing the resource into different parts (other resource managers or 20b and 22); storing each part in a different memory bank (see figure 10); and operating the resource address generator 20A to generate coordinates which are used to select the parts (via evaluation section 21) that are used by each processor (see figure 10., the selection being arranged to ensure that each part is only used by one processor at a time (see col. 5, lines 1-5 and 34-40)

With respect to claim 8, see col. 5, lines 1-5, 43-40 and col. 6, line 63-col. 7, line 4.

Art Unit: 2626

Claims Objected to as Containing Allowable Matter

2. Claims 3-6 and 9-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerome Grant II whose telephone number is 305-4391. The examiner can normally be reached on Mon.-Fri. from 9:00 to 5:00.
